NEW Spring Catalogue OUT NOW

Check out the new North West Ag Spring catalogue and pick up a great deal when you are next in store!

Summer Forage Seed Available

North West Ag has a supply of both Pioneer's Super Sweet Sudan (SSS) sorghum and Seed Distributor's Rebound millet on hand for summer forage production.

SSS is quick to graze and sustains multiple and intensive grazing. It produces high quality hay and round bale silage suitable for sheep and cattle and is adaptable for early or late planting.

Key features

- GROW MORE WITH LESS - High quality, smaller seed means you plant more hectares with less kilograms
- Wide area adaption
- Very fast growth and regrowth
- Prolific tillering habit
- Superfine stems
- Super sweet and leafy
- Super high-quality hay
- Highly palatable at all stages of maturity and growth
- Suited for dryland situations and intensive irrigation

Rebound Millet is a very fast growing, high yielding leafy plant for either grazing or hay. Rebound provides palatable feed of good quality. A feature of this plant is its very rapid growth during the first 8-10 weeks. In this period it far out-yields other fodder crops. Typically Rebound sown in early November can be grazed about 6 weeks later (mid-late December). Rebound is a useful feed supplement during the hot summer months when the growth of permanent pasture may suffer.

Key features

- Fast growing summer grass
- Safe, good quality palatable feed
- Ideal in hot summer and high temperature regions
- Fast regrowth after grazing or cutting
- Combines well with other summer active varieties such as Red Clover or Brassica
- Plant on 14°C and rising soil temperatures.

Contact your local North West Ag store for more details.

Remove residues from Boom Sprayers with All Clear® DS

All Clear DS

Contamination of boom sprayers and ineffective cleaning may lead to crop damage and yield loss, tank residues and breach of MRL's, equipment corrosion and blocked filters and lines.

Crop protection chemicals can bind to the inside of spray tanks, hoses, nozzles and filters. In many cases, flushing with water will not remove these residues. Until now, operators have needed to use many different decontamination products, depending on the situation, including chlorine bleach, ammonia and laundry detergent. All Clear DS makes the choice of tank cleaner simple. Not only will it perform as well as the cleaning agent recommended on the labels of many products, but laboratory data shows that All Clear DS will often do a better job.

Pick up All Clear DS at your local North West Ag store.
