## Twine

Talk to your local North West Ag store to secure your twine and wrap requirements for this hay season. Below are product specs on some of the range available.

### Hercules® HD+ 1250m

- The strongest twine
- Higher tensile strength and longer length than the standard Hercules®
- The perfect twine for the toughest conditions.
- Guaranteed minimum length in all of our twines
- Don't get caught out with short running spools

Product/Brand	New Code	Old Code	Colour	Length/Spool	Spools/Pack	Packs/Pallet
Tapex Hercules® HD+	60210846	160226	Blue	1250 m	1	48

- **Hercules® HD 2200m**
- Developed in Australia for the new generation 'High Density' large square balers
- Hercules® HD is UV resistant twine, making it perfect for use even in the toughest Australian conditions.
- Guaranteed minimum length in all of our twines
- Don't get caught out with short running spools.

Product/Brand	New Code	Old Code	Colour	Length/Pack	Spools/Pack	Packs/Pallet
Tapex Hercules® HD	60210646	160210	Blue	2200 m	2	24

Packs required for 1000 bales = 19 \*

Packs required for 5000 bales = 95 \*

\* Based on 8' x 4' x 3' bales size and 6 strings.

- Titan® Baling Twine 2500m
- High strength performance and extra length
- Developed for large square bales of weights up to 750 kg
- Ideal to partner with Trojan® Plus.

Product/Brand	New Code	Old Code	Colour	Length/Pack	Spools/Pack	Packs/Pallet
Tapex Titan®	60212544	160850	Blue/Yellow	2500 m	2	24

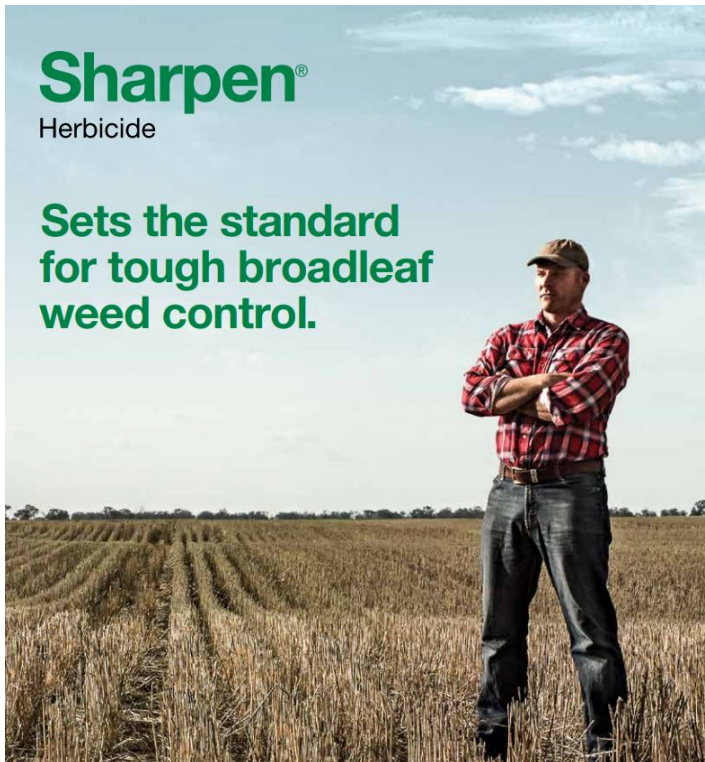

### Agpac Range

- High and constant knot strength enables tighter bales
- Firm film technology offers 10-20% longer runnage per kilo with the same specified breaking strength, compared to competitors
- A soft twine and tight tolerances are both evidence of high quality
- Guaranteed runage per metre and per pack

LARGE SQUARE TWINE					
PROUCT/BRAND	APPLICATION	COLOUR	LENGTH/PACK	SPOOLS /PACK	PACKS / PALLET
Super Extreme	Big Square	White	2000 m	2	32
Magnum	Big Square	Blue	2200 m	2	48
Big Square	Big Square	Blue	2400 m	2	48
Fat	Conventional	Blue	3000 m	2	80

## A new registration for Sharpen

BASF have announced the registration of Sharpen® Herbicide for late-application in cereals. Sharpen is now registered for reduction of wild radish seed set and viability of weeds seeds in wheat, barley and triticale from the early milky dough crop stage (GS71). This is a great outcome with the registration completed in time for the season.

Compared to other options registered for top-cropping in cereals, Sharpen provides the following benefits:

- A new mode of action for late-season weed control
- An earlier and more optimal pre-harvest application window (GS 71)
- Up to 90% reduction of wild radish seed-set
- Rapid reduction of green trash to improve harvest efficiency
- Less resistance pressure on glyphosate

Contact your local North West Ag store for more information.

## Avenge - No Lice. No Flies. No Worries.

Avenge is the only knockdown, pour-on lice treatment with 4 weeks residual protection.

100% knockdown efficacy to kill lice fast, including strains resistant to other chemical classes.

**Flexible** - can be applied up to 7 days after shearing. Safe to use on unshorn lambs up to 2 months of age.

**Rainfast** - tested in various rainfall conditions and proven itself effective on sheep that have been rained on - before and after treatment.

High volume dose for better coverage and spread.

No need to keep sheep penned after application.

Easy application using a Bayer Avenge manual or compressed air/gas (Power Doser) applicator.

Contact your local North West Ag store for more information and to indicate your Avenge requirements this season.
